

1. What is HTML and why is it called a markup language?

HTML is Hyper Text Markup Language is the standard language. it used to create and structure content on web pages. It tells a web browser what each part of a page is.

example : Paragraph, heading, images, links, tables

HTML called a Markup language because it "marks up" text with tags to describe its structure and meaning. The word markup comes from editors marking documents with notes like "title", "bold".

2. What is the diff btw HTML and HTML 5?

HTML

old version

Limited Multimedia

Doctype is lengthy

No Semantic tags

Limited meta tags

Less API Support

HTML 5

Latest version

Build in audio/video

short Doctype

Support Semantic tags

unlimited meta tags

Modern API

3. What is Purpose of `<!DOCTYPE html>` in HTML?

`<!DOCTYPE html>` tells the web browser that the document is written in HTML5. It helps the browser display the webpage correctly and consistently.

It is at the very top of an HTML document. It informs the browser the page uses the HTML5 standard.

* Standards Mode

* Quirks Mode.

4. What is the difference tags and elements in HTML?

Tags

markup inside `< >`

Example :- `<P>`

Does not include content
used to define elements

Elements

complete structure

`<P> Hello </P>`

include tags + content
Actual webpage component

5. What are Semantic tags : Give the Example.

The semantic tags describe the meaning of content. They improve structure, SEO and accessibility.

Examples: `<header>`, `<footer>`, `<nav>`, `<section>`,

6. What is the difference between semantic tags and non-semantic tags?

semantic tags

non-semantic tags

Describe the meaning of content

Do not describe the meaning.

Easy to understand

Generic containers

improve SEO and accessibility

mainly used for styling / layout

clearly define webpage structure

no specific purpose

Example :- `<header>` `<footer>`

Example :- `<div>` `<span>`

7. What are meta tags and why are they used?

Meta tags are special HTML tags that provide information about a webpage to browsers and search engines. They are written inside the `<head>` section and are not directly visible on the webpage. The meta tags are used in

- * character encoding
- * Page description
- * key words
- * mobile responsiveness.
- * browser compatibility
- * SEO experience

8. Why do we use the `<source>` tag inside audio and video tags?

The `<source>` tags are used to specify the media file that should be played. It also allows us to provide multiple file formats so different browsers can support properly. Improves browser compatibility and media playback reliability.

9. What is `iframe` and where is it used in real-time applications?

An `<iframe>` is an HTML element used to embed another webpage or external content inside a webpage. It creates a small window within the current web page.

Real time applications:-

- * Youtube video Embedding
- * Google maps Integration
- * Payment Gateways
- * Advertisements
- * Social media Posts
- * Online documents.
